All tools available

Our fully web-based parking management system, Park-Spot Reservations, comes complete with a webshop for your sales channels, which you can manage yourself. This parking management system allows visitors to reserve parking spaces, apply discount codes, and make cancellations. Thanks to Park-Spot Reservations, large investments or high commissions are not necessary.

White label platform

Park-Spot Reservations is a white-label platform, which allows you to personalize the booking webshop to your own corporate identity on multiple online environments. The system also makes it possible to turn surrounding businesses, such as cinemas or hotels, into sales channels while leaving you in control of your facilities at all times. The ability to manage availability and parking fees is accessible at all times and from any location.

Manage your own webshop easily

From a convenient and fully integrated back-office system, you can manage your booking webshop by yourself, from adding parking products to designing your parking tickets. Additionally, the system provides real-time insight into the performance of your webshop, including your most important KPIs. Park-Spot Reservations are connected to a payment service provider to enable online payments and self-serve cancellations and refunds. This solution creates less work for the provider and more convenience for the customers.

Maximum occupancy

Finally, you can also choose to use our 'third-party aggregators.' They will trade any remaining parking spaces that are going unused.

Through Park-Spot Reservations, our convenient web-based booking system, you are assured of optimized occupancy parking, and customers are guaranteed a parking spot before arrival.
